The Fire Engines - Wikipedia

Fire is the rapid oxidation of a material in the exothermic chemical process of combustion, releasing heat, light, and various reaction products. Slower oxidative processes like rusting or digestion are not included by this definition.. Fire is hot because the conversion of the weak double bond in molecular oxygen, O₂, to the stronger bonds in the combustion products carbon dioxide and water ...

A: The reason that our 2 stroke engine kits are labeled as 66/80cc is because engine displacement is read differently in the United States then it is in China. An engine's displacement is determined by finding the volume of one cylinder using its stroke and bore, and multiplying the resulting number by the total number of cylinders.
