Exploration of Swarm Optimization and Its Impact in QoS

In computer science and operations research, a genetic algorithm (GA) is a metaheuristic inspired by the process of natural selection that belongs to the larger class of evolutionary algorithms (EA). Genetic algorithms are commonly used to generate high-quality solutions to optimization and search problems by relying on bio-inspired operators such as mutation, crossover and selection.

Applied Soft Computing is an international journal promoting an integrated view of soft computing to solve real life problems. Soft computing is a collection of methodologies, which aim to exploit tolerance for imprecision, uncertainty and partial truth to achieve tractability, robustness and low solution cost.

Into the light: A naturally inspired light•harvesting system (LHS) was fabricated through entrapment of chromophores in cross•linked reverse vesicles (cRVs).Benefiting from the confined nanospace of cRVs and the aggregation•induced emission properties of the donor and acceptor, the LHS achieved excellent light•harvesting efficiency and luminescence upon transfer from an organic phase ...

Solid phase microextraction (SPME) is well-established technology in bioanalysis. Current review discusses the features of SPME, which determine the non- or low-invasiveness of the method in biomedical analysis. In the first section we analyze the factors, which have significant influence on the SPME sampling device performance in the view of sampling safety and efficiency.

In vivo and ex vivo SPME: a low invasive sampling and

SyNAPSE is a DARPA-funded program to develop electronic neuromorphic machine technology that scales to biological levels. More simply stated, it is an attempt to build a new kind of computer with similar form and function to the mammalian brain.Such artificial brains would be used to build robots whose intelligence matches that of mice and cats.
