2.3 Protein Purification Protein mixtures can be fractionated by chromatography. Proteins and other charged biological polymers migrate in an electric field. 2.4 Primary Structure of Proteins The amino acid sequence or primary structure of a purified protein can be determined. Polypeptide sequences can be obtained from nucleic acid sequences.

proteins at atomic resolution. NMR spectroscopy is the only method that allows the determination of three-dimensional structures of proteins molecules in the solution phase. In addition NMR spectroscopy is a very useful method for the study of kinetic reactions and properties of proteins at the atomic level.
