and hence in the objective achieved. Sensitivity analysis studies the displacement of the dynamic system or objective functional in response to such a change in parameters. Sensitivity was first introduced by Bode (1945) and after some twenty years, further developed by Lindorff (1963), Tomovic (1963) and 1972) .

III. The OC (optimal control) way of solving the problem We will solve dynamic optimization problems using two related methods. The first of these is called optimal control. Optimal control makes use of Pontryagin's maximum principle. To see this approach, first note that for most specifications, economic intuition tells us that $x_2 > 0$ and $x_3 = 0$.

2 Introduction to dynamic optimization Dynamic optimization problems are substantially optimization problems where the deci-sions variables and other parameters of the problem possibly vary with time. In fact it is not easy to give a formal deï¬,nition of what dynamic optimization problems are: we will not attempt to do it.
