The mean of a probability distribution is the long-run arithmetic average value of a random variable having that distribution. In this context, it is also known as the expected value.For a discrete probability distribution, the mean is given by $\sum$ (), where the sum is taken over all possible values of the random variable and () is the probability mass function.

Mean - Wikipedia
Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.
