

inverse synthetic aperture radar pdf

Inverse synthetic aperture Radar (ISAR) is a powerful signal processing technique that can provide a two-dimensional electromagnetic image of an area or target of interest.

antenna aperture. A synthetic aperture array technique is used to improve the azimuth resolution. In synthetic aperture radar (SAR), the radar illuminates the object many times as it passes by. Then with subsequent processing, it is equivalent to illuminates the object one time but with the longer synthesized aperture.

View PDF Content type: Research Article. Adaptive Local Polynomial Fourier Transform in ISAR. The adaptive local polynomial Fourier transform is employed for improvement of the ISAR images in complex reflector geometry cases, as well as in cases of fast maneuvering targets. ... Introduction to Inverse Synthetic Aperture Radar Instructor

The use of multiple radar configurations can overcome some of the geometrical limitations that exist when obtaining radar images of a target using inverse synthetic aperture radar (ISAR) techniques.

longer wavelengths is to create a synthetic aperture. There are three types of synthetic aperture radar (SAR): linear SAR, spotlight SAR, and inverse SAR (ISAR) [7].

Terahertz inverse synthetic aperture radar (ISAR) imaging

Along with the improvement of radar technologies, as well as high demands in target identification in radar application, the Synthetic Aperture Radar (SAR) and ISAR automatic target recognition are powerful techniques to generate high-resolution images two-dimensional images virtually in any type of weather conditions and lighting.

A Multiple Radar Approach for Automatic Target Recognition

Inverse Synthetic Aperture Radar (ISAR) is a powerful radar signal processing that is able to form e.m. images of moving targets. ISAR processing is often erroneously considered as a subset of Synthetic Aperture Radar (SAR) processing.

Introduction to Inverse Synthetic Aperture Radar

Inverse synthetic aperture radar (ISAR) is a radar technique using Radar imaging to generate a two-dimensional high resolution image of a target. It is analogous to conventional SAR , except that ISAR technology utilizes the movement of the target rather than the emitter to create the synthetic aperture.

Inverse synthetic-aperture radar - Wikipedia

Inverse synthetic aperture radar (ISAR) is different from synthetic aperture radar (SAR) because the former has a larger antenna aperture based on target motion while the radar remains stationary and generates a high-resolution image of moving targets.

Inverse Synthetic Aperture Radar Imaging: Principles

The book offers a fair amount of signal processing techniques and radar basics before introducing the inverse problem of ISAR and the forward problem of Synthetic Aperture Radar (SAR). Important concepts of SAR such as resolution, pulse compression and image formation are given together with associated MATLAB codes.

Inverse Synthetic Aperture Radar Imaging with MATLAB

First, a detailed review of radar imaging theory is conducted. This review starts with basic one-dimensional down-range profiles and Synthetic Aperture Radar theory.
