c 2007 by Karl Sigman 1 Review of Probability Random variables are denoted by X, Y, Z, etc. The cumulative distribution function (c.d.f.) of a random variable X is denoted by $F(x) = P(X \leq x)$, and if the random variable is continuous then its probability density function is denoted by $f(x)$ which is related to $F(x)$ via

Winter 2012 Math 255 6) Find the circulation and ux of the eld $F = y^i + x^j$; around and across the closed semicircular path that consists of the semicircular arch r

Problem Set 10 - University of Michigan

16 Vector Calculus 16.1 Vector Fields This chapter is concerned with applying calculus in the context of vector fields. A two-dimensional vector field is a function f that maps each point (x,y) in R^2 to a two-dimensional vector hu,vi , and similarly a three-dimensional vector field maps (x,y,z) to

Vector Calculus

Differentiable Functions is approximated near c by the linear function $f_0(c)h$: Thus, $f_0(c)$ may be interpreted as a scaling factor by which a differentiable function f shrinks or stretches lengths near c . If $f_0(c) < 1$, then f

shrinks the length of a small interval about cby (ap-
